

INTRODUCTION

"Health Law" is one of the vast fields of interdisciplinary sciences that was formed by integrating related knowledge in the fields of law, ethics, health, medicine, biology, economics and policy.

Health law is discussed in all parts of the healthcare system and regulate various principles and rules in the health field and can be related to "Medical Law", but there is a significant difference between them.

"Medical Law" is merely a branch of "Health Law".

"Health Law" is a new and extensive branch of law in recent decades emphasizing all health care professionals as well as areas such as food law, drug law, health economics law, environmental law and medical law. It deals with the health of individuals and populations, the provision of health care and the functioning of the health care system.
