INTRODUCTION

Preparing nurses to face the changes of the information age requires preparation and planning. Certainly, education and culture-building is the first prerequisite for more effective use of information technology in nursing with the aim of improving the quality of care and improving the health of society.

The purpose of this training program is to familiarize nurses with the basic requirements that a nurse should know about information technology so that in today's challenging and evolving world of information, they can use these tools to offer more beneficial care. In the Smart University of Medical Sciences, with the formation of the nursing informatics group, a flexible virtual nursing informatics course has been developed and presented at two levels, focusing on nursing informatics qualifications, for all nurses in the country in a wide geographical area.nurse in country.
