

INTRODUCTION

Pharmacists' approach has changed from drug-oriented to patient-oriented during recent decades. In other words, pharmacists have moved from practice based on prescriptions towards playing a wider role in the health system.

Pharmacists, as the most accessible reliable people working in medicine, can play an important role in the field of counseling patients and promoting the health of society.

In this regard, the Smart University of Medical Sciences, considering its existing capabilities and capacities, has designed the "Principles of Patient Education and Counseling in Pharmacy" course. This course has been designed with the aim of improving the knowledge of pharmacists by focusing on practical points, in order to improve the level of health and services provided to patients.
